If any items are missing from your product packaging, contact Customer Support immediately at www.sabioproducts.com.

What You Need

Wired network
(required for first-time setup)

Wireless network
(optional for everyday use)

Setting Up

Unpack the box, remove the NAS, then make sure that each of the drive bay doors is securely shut.

Caution: The drives are **not** hot swappable. To exchange or add a drive, you **must** first turn off the NAS.

continued...

2

Connect the Ethernet cable to the Ethernet jack on the back of the NAS, then to any open port on your network, switch, or router. Make sure that all devices you want to have access to the NAS are on the same network.

- The Ethernet cable is required for first-time setup.
- If you will use a wireless connection, also attach the two antennas to the back of the NAS.

5

When the Sabio Storage login screen opens, type **admin** for both the username and the password, then click **Login**. The main menu opens.

3

Connect the DC power cable to the **DC IN** power connector on the back of the NAS, press the top of the rear **POWER** switch to the "I" (on) position, then press the front power button. The power indicator turns on.

6

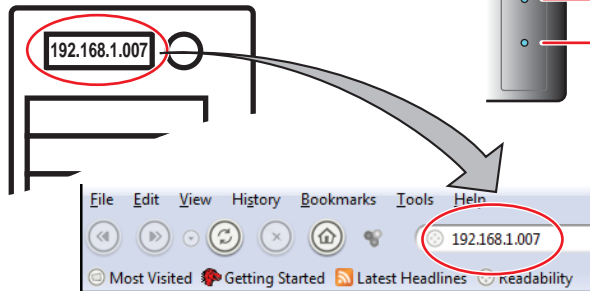

To set up a the drives as standard, standalone drives, click **Maintenance**, **Disk Utility**, then change settings as needed and click **Format** for each drive you want to use. Your NAS reboots after each format.

- OR -

To set up a RAID array, click **Maintenance**, then click **RAID Setting**. Change the settings as needed, then click **Create raid system**. Your NAS reboots.

4

When the display changes from "Booting" to "IP Address," enter the number that's displayed into your Web browser's address line, then press **Enter**.

Note: The computer that you use for this step must be on the same network as the CM404.

Tip: If the IP address doesn't appear on the display, rotate the display control knob until it does.

7

Log in as **admin**, click **Quick Setup**, then click **Wizard** and follow the on-screen instructions to set up basic configuration for your NAS.

8

After the setup wizard is complete:

- To set up wireless connectivity, click the **Control Panel** tab, then click **System**, then **Wireless Settings**.
- To format any of the installed drives, click the **Control Panel** tab, then click **Maintenance**, then **Disk Utility**.
- To set up a RAID array, click the **Control Panel** tab, then click **Maintenance**, then **RAID Setting**.
